DETAILED ACTION

1. Applicants' response to the Office Action mailed on July 15, 2004 has been acknowledged. Currently, claims 12-22 are pending and under consideration.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claim 12 is rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for Major Urinary Protein from mice and $\alpha 2u$ globulin from rats, does not reasonably provide enablement for any and all urinary proteins from other species. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims. Claim 12 is drawn to a method of detecting a rodent infestation comprising taking a sample from a surface upon which a urinary protein has been deposited or over which a rodent has putatively traveled or both; performing an assay to detect the presence of the urinary protein in the sample and detecting a rodent infestation based upon the presence of the urinary protein detected in the sample. Claim 12 has not taught one of ordinary skill in the art as to how any and all urinary proteins can be linked to a rodent infestation based on the presence of the urinary protein recited in the instant claim 12. The specification teaches Major

Urinary Proteins and α 2u globulins urinary proteins from rats and has linked these proteins to rodent infestation. The instant claim 12 is not is not enabled for urinary proteins from other species, neither does the specification support this teaching. This rejection can be obviated with claim language that teaches an antibody utilized against Major Urinary Proteins or α 2u globulins.

Allowable Subject Matter

4. Claims 13-22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

5. Applicant's arguments with respect to claim 12-22 have been considered but are moot in view of the new ground(s) of rejection.
